Introducere

Scriu acest raport de expert în calitate de inginer britanic, inventator, autor de brevete și om de știință în cercetarea armelor; un inginer cu experiență în știința materialelor și inventator al primelor ghiduri de unde optice binoculare din lume, sisteme de vizualizare a armelor, display-uri pentru imagini termice în infraroșu, reactoare moleculare, procesare a semnalului și design de traductoare, pentru a numi doar câteva.

În calitate de Chief Technology Officer (CTO) al companiei care a proiectat și introdus pe piață primul produs HUD (head up display) din lume aprobat la nivel internațional, acreditat cu o serie de premii pentru inovație, dar, mai important, reglementat la o serie de standarde recunoscute internațional, inclusiv (DOT) Departamentul de Transport ECE 22.05, precum și ANSI și altele, am avut încredere în stabilirea standardelor internaționale pentru sistemele HUD de realitate augmentată (AR) și realitate virtuală (VR).

Consultați Anexa 2a, de la avocatul de brevete, ex. 2b de la Recorder Nolan, ex. 2c Comandamentul cibernetic, ex. Standarde 2d pentru sistemele HUD, ex. 2di apendice.

Cyber Command USA had been made aware of my expertise and specifically requested my advice with regard to an unusual 5G antenna design deployed across the USA. I have been extremely fortunate that most (but not all) of my research and product development work has been carried out outside of the Official Secrets Acts (OSA) legislation.

I have acted as a witness and provided statements in several court cases, exposing the lack of any credible evidence that the 5G light-emitting diode (LED) network and planned neural connection to the 5G grid are safe.

This includes nano metamaterial technologies that are contaminating vaccinations, that are not legal or lawful, and that breach a number of international and domestic laws.

Judge Nolan at Newcastle Crown Court stated that **“The 5G risk must be debated”** and that “**This is a democracy and the public have a right to know”.**

The evidence I presented to the court defeated the attempt by the local authorities and actors in the British establishment to silence me from providing the published scientific evidence on the risks posed to the public and environment from the 5G urban radar network and its ultimate purpose.

The failed court action taken by the local authority created a publicity storm that helped to highlight t**he actual risks from the 5G deployment across the world, as well as the total lack of care taken by regulators allowing this 5G deployment.**

My involvement with several research and development projects spans my entire working career and includes some of a sensitive nature due to Official Secrets Act 1911 restrictions and therefore I am not at liberty to disclose these in a public domain; suffice to say this work has led to an understanding of Department of Defense (DOD) contracts, the compartmentalization of weapon product design projects, and Directed Energy Weapons (DEW), whose existence has until recently been obscured and sometimes denied. I.1.

The use of directional microwave radiation weapons by unknown actors on US embassies in Cuba, China and Russia, known as Havana Syndrome, is still not fully recognized by the authorities. Havana Syndrome bears all the hallmarks of microwave radiation emissions, which have

left victims suffering significant and irreparable neurological damage, among other injuries. The US government has been unable to keep these weapons secret and recently passed a bill to compensate embassy staff victims. I.2

The US intelligence agencies, in their communications with the Russian government, confirm that they already knew of the existence and capability of microwave radiation weapons and their appeal to their assumed Russian adversaries was for the cessation of the use of these weapons against their embassies. I.3

My research field also covers other battlefield interrogation and weapon systems, including Lethal Autonomous Weapons Systems (LAWS), I.4, Autonomous Underwater Vehicles (AUV), Light Detection And Ranging (LIDAR), phased array radar technologies, including 5G for tracking weapons platforms, as well as biological assets on and off the battlefield that are increasingly used in a civilian setting to include facial recognition technologies, autonomous electric vehicles, drones, none of which have been fully environmentally assessed for harm from their radiation emissions to the general public or wildlife. I.5

5G urban radar, ionizing radiation and critical infrastructure risks

5G, unlike all of the other generations (Gs) of telecommunications, is technically identified as an urban radar directed energy in air emission, which requires the antenna to be designed to cause the focused energy in air for the high-speed compression of data to and from **antennas designed to send and receive focused energy through a theoretical collimated and coherent signal.** II.1

The beam forming wave in the main lobe emission breaches the International Commission on Non-Ionizing Radiation Protection (ICNIRP) guideline of 61V for a maximum exposure of 6 minutes. II.2

This ICNIRP guideline is contrary to the Council of Europe (COE) 1815 Resolution and to the European 2016 guideline, which confirm the published peer-reviewed science that anything over 600 mV/m should be limited to short-term exposure, and long-term exposure should be no more than 200 mV/m. This is orders of magnitude lower than the 6-minute, 61,000 mV ICNIRP guideline, which is a biological cooking value. ICNIRP is widely acknowledged to be a “captured agency”, as confirmed in the Italian courts. II.3

The sweeping movement of the beam wave at over 13.6V causes the positive charging of air, which is noxious to all biological life at significant distances from the antenna emission to the target acquisition zone, such is the capability of the 5G hard- and software and is the very reason this equipment is, and has been, used extensively on the battlefield as scanning environment radar and Directed Energy Weapons (DEWs) for the purpose of disrupting and disabling enemy hardware, as well as biological assets, i.e. humans. II.4

Typically, **the 5G antenna design uses a larger power input and directed output to deliver focused, high-power data compression signals measured in watts or electron volts.**

The aviation industry, including Boeing and Airbus, have recently raised concerns over 5G due to its capability to endanger passenger aircraft that do not have the military mitigation technologies in a civilian setting to protect their pilots or aeroplane flight control systems against directed energy emissions. II.5

The telecoms industry and other regulatory bodies have continually denied the real purpose, and existence of the radiation dangers posed by the deployment of 5G technologies; they have actively misled the public by issuing demonstrably false press releases through local and national media, as well as by making false statements in courts in failed attempts to discredit experts, including myself, even though they had been advised by their own intelligence agencies that the experimental, uninsurable-for-harm technology was and is extremely dangerous to the security of the state. II.6

“Backhaul” in the context of 5G is the term used for the technological advance that enables data to be interrogated and uplifted from multiple devices and environments simultaneously; in other words spying across the whole area, leaving no chance of any privacy.

The capability of interrogation and digitization of the intelligence gathered breaches a number of human rights laws. This patent (II.7), one of a number that confirm the capability to interrogate sound and voice emissions through buildings to gather data on an unsuspecting population using electromagnetic hardware and software systems, are all part of the vast 5G toolbox.

Spectrum dominance of the 5G network from sub 3 GHz to 300 GHz poses a real risk of bodily harm from higher photon energy value frequencies that are coherent radiation emissions, the impact of which is currently unknown since they are untested and not proven to be safe, as well as uninsurable, with levels of radiation emissions in excess of anything imagined by earlier technologists. ICNIRP guideline radiation values apply only to single antenna device emitters, and do not take into account the massive increase and multiplication of radiation emission devices proposed across all cities and towns for the 5G network, which is intended to interconnect everything simultaneously using highly complex, biologically toxic, and in particular, modulated microwave radiation. II.8

5G deployment is under way by governments across the world in all cities and towns without any of the obligatory prior environmental impact analysis or public insurance for instruments of harm (II.9), rendering the whole network deployment an illegal and unlawful act by authorities acting ultra vires in allowing known biologically toxic ionizing and non-ionizing radiation emissions unfettered access to the environment. Telecoms companies generally self-certify having met (obsolete) ICNIRP guidelines, which allows them to breach those guidelines without sanction as there are no regulatory bodies making independent assessments of adherence to the ICNIRP guidelines. II.10.

These are the same ICNIRP guidelines that have been shown to cause ill health and cancers in the general population in proximity to the existing 4G networks. II.11

A further troubling factor is that the telecommunications industry responsible for the deployment have confirmed that they, the industry, have not carried out any scientific research and therefore have **no current published scientific research data on the actual impact of 5G networks on the environment.**

Independent research studies on the subject refute industry and government propaganda about the safety of the 5G network. II.12

Government agencies who are tasked with protecting the population from the confirmed cancer-causing properties of non-ionizing and ionizing radiation have failed to provide a regulatory framework of safety standards or guidelines to protect the environment, thereby **exposing an unsuspecting public to levels of radiation that are harmful and life-threatening.** II.13

Serious critical infrastructure risks have been ignored in the unregulated rush to deploy the 5G network. Industry and government regulators across the world have ignored a number of serious scientifically established risks arising from the mass densification of 5G, Internet of Things (IOT) and SMART aircraft, electrical grid Internet communications, city antenna systems, which require billions of large spectrum quadrature amplitude modulated (QAM) microwave radiation transmitters.

Canada's cellular network in 2018 was supported by approximately 33,000 large towers of up to 200 feet in height. The new 5G protocol will require many more, higher radiation beam wave emissions using precisely located towers across Canada's towns and cities – an estimated 273,000 – at a much shorter height with significantly larger energy demands on the electric grid and network. II.14

The propaganda narrative of industry and agencies claiming these 5G networks use less energy is demonstrably false. The massive increase in antennas from massive multiple-in multiple-out (MIMO) antennas for 5G, plus the mini and micro relay networks, as well as increased device data usage all require further power consumption in watts. The continual, not-on-demand, scanning radar designed to pick out the target area is continually in operation, with the added overlaying of multiples of higher energy focused beam waves, created by the out-of-phase emission antennas. These focused high energy beam waves, operating across a larger part of the spectrum, use higher energy photon values in the compressed millimetre wave spectrum to deliver high power data compression beams across urban areas and is the reason the aviation industry are very concerned at the risks posed to their communication systems critical to keeping aircraft safe in the air.

The planned and currently deployed 5G mass antenna installations all add to an ever-increasing requirement for more energy to produce the increased data transfer through radiation emissions across cities and towns. Microwave radiation emissions are known to increase thermal temperatures, contributing to the climate change challenges and life-threatening effects of raising temperatures in cities. Heat island impacts are defined as large urban areas that are affected by increases in city temperatures that have been recognized by the Environmental Protection Agency (EPA) as causing detrimental health impacts and increases in energy consumption. II.15

Energy consumption in heat islands increases demand for air conditioning to cool buildings. In an assessment of case studies spanning locations in several countries, electricity demand for air conditioning increased approximately 1–9% for each 2°F increase in temperature. Countries where most buildings have air conditioning, such as the United States, had the highest increase in electricity demand. Heat islands contribute to higher daytime temperatures, reduced night-time cooling, and higher air-pollution levels. These, in turn, contribute to heat-related deaths and heat-related illnesses such as general discomfort, respiratory difficulties, heat cramps, heat exhaustion, and non-fatal heat stroke.

Microwave radiation will also affect a large number of molecular structures in materials, which increases building fire risk. This is due to hydrocarbon elements in buildings breaking down due to modulated microwave radiation, which causes localized heating and the breakdown of materials. Microwave radiation at certain frequencies will excite water molecules and if there is no moisture available, other less volatile molecules will absorb the radiation and start to heat. Therefore, any material that has dried out can overheat and ignite more easily in a microwave field, a type of priming. The risks particular to the 5G radiation emissions are due to the proposed mass densification and spectrum dominance of the radiation emissions. Also, any metal objects inside a microwave field can exhibit dielectric properties that can cause sparking, which could lead to a fire; this is caused by a build-up of charged particles, energy that produces a concentrated electric field at the edge of the metal. II.16

These are all scientific phenomena that have been ignored by the regulators and industry, but the most alarming, unrecognized and unregulated issue is fatigue of materials caused by the continual bombardment of 5G data compression and focused (QAM) modulated microwave energy fields. 5G requires far more complex and focused data package compression of energy.

The potential for specific frequency causing the disassociation of molecular structures of solid building materials, priceless artworks, and wine collections, among other things, cannot be overstated due to the currently un-researched cross-wave impacts of such high levels of energy-in-air modulated radiation emissions. This cacophony of microwave radiation pollution could lead to severe failures in larger capital equipment, including the electrical grid. Current critical infrastructure was never assessed or engineered with this pulse-vibration, energy-in-air value added to the materials' fatigue calculation and ultimate life expectancy of the established infrastructure, including the power grid. II.17

What has also been discovered is unnecessary latent power capacitance built into the 5G SMART IOT hardware network. This large capacitance could easily be used for a possible Electro Magnetic Pulse (EMP) attack on cities and populations II.18

This would depend on the known interconnectivity and remote access of an easily hackable network to all emission devices in the built up radiation 5G grid. II.19

5G operating systems have already been compromised and could pose a significant security risk, as EMPs can cause a major disruption to electromagnetic communication systems, the electrical grid and electronics hardware; EMP emissions usually come from sources including the Sun and a number of developed weapons. II.20

The electromagnetic pulse wave from nuclear bomb testing was shown to cause large electrical grid disturbances at great distances. Something similar happened when 5G was switched on in South Korea in April 2019: it caused a number of city fires due to the documented failure of the electrical grid transformers. The South Korean government and media passed this off as having been caused by forest fires in five separate cities simultaneously all across the country when 5G was turned on, but this alleged cause does not explain the electrical grid disturbance and destruction of critical electrical grid hardware. EMP risks identified in the USA demonstrate that this type of poorly regulated 5G technology poses a potential risk throughout the world. II.21

The telecommunications narrative for 5G is only a cover for its actual future capability and purpose, as confirmed by the total absence of environmental risk research and insurance liability cover for harm. The future domain for the battle space and the ongoing deployment of 5G technological advance include 5G weapons for warfare across cities, towns and countryside. The domain includes psychological warfare technologies, including control and dissemination of information through social media to obscure the real purpose of 5G as a warfare system.

> “The Fifth Generation mission-space represents a new environment in which future operations **will** take place. The complexity of the domain is exacerbated by uncontrolled and undefined actors directing or influencing the narrative. The greatest challenge of the new mission space is the total erosion of the concepts of the enemy and of war itself. The opponent will be much more ambiguous and warfare will become an insidious creep designed to degrade from within rather than attack from without”. (emphasis added) II.22

Special operations forces are already debating the opportunities and risks from the IOT 5G networks, with assassination through the LAWs that can be used to eliminate targeted individuals.

> “Metamaterial adoption has been greatest in communications, antennas, and radar systems, with related radio-frequency identification (RFID) applications for tagging, tracking, and locating. The move to 5G communications and extraordinary radar capabilities will push developments even faster, with commercial sales forecasted to exceed $10 billion annually by 2030. Metamaterials are integral to future high-performance, high-impedance, low-profile, conformal, and fractal antennas for communications and radar systems. Immense potential exists for game-changing shifts in military communications and radar systems through metamaterials. Indeed, as metamaterials become more fully integrated into antenna technologies, they will reduce system costs, enable smaller devices with reduced power requirements, facilitate novel shapes and form factors, and deliver more agile beam forming and shaping capabilities.” II.23

The military industrial complex across the world know only too well the advantages of using electromagnetic weapon systems for battlefield interrogation, namely 5G, and have done so since the emergence of the technology during the Second World War. What is also well understood is the vast body of published scientific data showing the detrimental health and environmental effects from the current telecommunications networks. 5G adds a whole range of further risks to the environment, and to the health of the population. II.24

This is not an argument that can now be disputed; mission creep and the planning of asymmetrical, unconventional warfare across cities should be of great concern, especially to the civilian population in case they become the target of an Orwellian technocratic, fascist regime. Who would be controlling the spying urban interrogation radar and directed energy in air weapon systems? II.25

Many opportunities are currently under discussion across the defence industry, focusing on the capability of the 5G urban networks to tag the population with metamaterial antennas, while serious concerns and risks are seemingly ignored. II.26

These agendas and future plans pose a significant risk to civil liberties, critical infrastructure and the rule of law.

Vaccination metamaterials, nanoparticle contamination magnetic fields

Vaccines have been shown in a number of studies to contain toxic metal contaminants, including “inexplicable” levels of nanometal contamination. III.1

This phenomenon is far from inexplicable if the research scientists who carried out this study had had knowledge of the defence industry goals and the metamaterial ingredients that can be used to enhance urban 5G interrogation technologies, as well as various other nano material development projects. III.2

Metals are almost universally radar-reflective and therefore are visible for use as a means of detecting objects. “Wetware” is the name given to biological structures operating in the battlefield space that are far more difficult to track and trace or attack using LIDAR, RADAR or DEWs. Metals are strong reflectors of electromagnetic waves and allow for increased detection and resolution from battlefield interrogation technologies. Specific metal shapes in polymers can be used for their dielectric properties to deflect and absorb the reflection and interrogation capability of current radar systems. III.3

However, without using this precise shape and polymer encapsulation, metal contamination in the form of metamaterials allows for a higher resolution of the target. After the Covid-19 vaccine technology is injected into the body, the target acquisition of wetware is far more precise and the technological field can be used to gather biometric data. It is envisaged that wearable and portable electronic devices that are currently in use to connect the person to the Cloud will become redundant due to these and further technological advances. The Neuralink control network uses implanted nano technology antennas that can gather such data and upload it to the Cloud; these innovations are well beyond the planning phase and all part of the future battlefield space. III.4

Dr Robert O. Young’s research confirms that the Covid-19 injections have been fully loaded with metamaterials, namely graphite, ferrous oxide nanoparticulates. III.5

This shocking discovery is confirmed through our own research carried out on victims, as well as thousands of anecdotal videos showing electromagnetic radiation emissions; together with magnets and metal objects reacting to the injection sites of those vaccinated with the Covid-19 serum. Other biomarkers used include SM-102, which is a toxic phospholipid present in the Moderna Covid-19 vaccines, a synthetic luciferin that improves bioluminescence-imaging luciferase. III.6

Luciferins can be activated using electromagnetic radiation to create a bioluminescence of the subject. Facial recognition technologies, part of the 5G technology toolbox, can then be used to track and trace the contaminated subject across the environmental space.

The deaths and significant biological damage in the population caused by the Covid-19 experimental mRNA vaccine medical intervention have now been documented in nearly one thousand published scientific papers. III.7.

Covid-19 injections are now related to blood-clotting, myocarditis, pericarditis, thrombosis, thrombocytopenia, anaphylaxis, Bell’s palsy, Guillain-Barré syndrome, and cancer, among others. This is confirmed by irrefutable science and government-gathered data from the UK Health and Security Agency, which shows Covid-19 vaccines to be unsafe and ineffective.

Radiation-induced coronavirus COVID-19 symptoms

The vast majority of the populations across the West, in particular those of the Five Eyes community, the Anglosphere intelligence alliance comprising Australia, Canada, New Zealand, the United Kingdom, and the United States, **have been injected without their knowledge with**

nano metamaterial antennas and are unfortunately going to suffer increased mortality rates due to localized reflecting radiation emissions from the 5G urban radar. All of the known coronavirus symptoms can be attributed to ionizing and non-ionizing radiation pollution. IV.1, IV.2

5G has been identified in a number of published papers as the actual cause of the pandemic, the start of which coincided with the switching on of the 5G network in Wuhan province, whose population had just been vaccinated with a mandated flu vaccination. 5G has the potential to deliver ionizing energy levels that would cause immune system suppression, leaving the body at risk of disease. IV.3

The Covid-19 pathogen has not been isolated or purified and currently no government agency can provide the isolate or evidence of its actual existence, apart from the in-silica modelling created by the Wuhan Institute, which is officially acknowledged to be China's most advanced virus research lab complex. China has been a signatory to the Biological Weapons Convention (BWC) since 1985, and in 1993 declared the Wuhan Institute of Biological Products as one of eight bio warfare research facilities covered by the BWC. Any individual working at or on that site would be legally obliged not to divulge any secrets arising in the course of their employment at that facility and are therefore not at liberty to speak out. The Wuhan National Biosafety Level 4 (BSL-4) laboratory is dedicated to the research of severe infectious diseases. It has the highest level of biological safety and covers many of the bio toxins and **illegal** gain of function SARS-Cov-2 bioweapons developments, and was the source for the initial pathogen data for the existence of Covid-19 and the consequent international pharmaceutical business vaccination programme response. Coincidentally, the PCR test was never able to identify a live virus or pathogen and is the fundamental basis for the lockdowns across the world, which have been used with great effect to terrorize the world's population into believing that Covid-19 exists as a live virus and that the only survival strategy is taking a bio weapon technology masquerading as a vaccine. IV.4

The Centers for Disease Control (CDC) have now removed the PCR test as a diagnostic tool, after it was misused, which is evidence of its deliberate use to create fear and distress among a misinformed population. IV.5

Research scientists and medical doctors across the world have been gagged, threatened and vilified in the media and discredited as conspiracy theorists by governments and their agents when they have spoken out to oppose this trans-globalist agenda. The Great Barrington Declaration, with over **800,000 signatories,** has been ignored and vilified by those pushing their terrorizing narrative. It was unconscionably ignored so that the populations in the West could be terrorized into participating in the largest illegal and unlawful medical experiment in world history. IV.6

Augmented humans increasing mortality in 5G radiation fields

Augmented humans and their so-called biological enhancement are already forming part of governments' and defence industries' wider digital connected world agenda. V.1.

Amazingly, in representative democracies across the world, this is happening without any public consultation, with zero public debate by the proposed participants of this ideological, technological, political agenda. V.2

It can be postulated that the only reason the technocratic elite, including the driving forces of the World Economic Forum (WEF) and the United Nations (UN) with its Agenda 2030, could have for keeping this digital connected world agenda from the public is that they would condemn and refuse to participate in it. Although there are obvious, serious legal and lawful implications surrounding this agenda, the focus should be on the legal implications of allowing the use of biologically harmful technologies that will have a detrimental impact on health, the environment, and mortality. Currently there is no credible safety data or research showing the deployment of this technology to be safe. Another shocking example of a product being brought to market with no optical safety standard norms or testing protocols is virtual reality (VR) headsets. Despite the fact that artificial optical radiation is a known environmental and human hazard, these headsets require a magnification of optical radiation as a retinal display and confirm the total disregard for safety and the law. A further example, the neural uplink technology requires the insertion or injection of nano metamaterials that have antenna capability into the brains and bodies of humans across the planet. V.3

Nano materials have already been shown in the published literature to produce detrimental biological effects causing cell death and potential fertility problems. V.4, V.5

It is suggested that nano antennas are used to receive and respond using coherent compression of QAM data within the body, without any corresponding safety data, thereby creating a population of radiation emission entities, which under certain legal definitions would become electrical devices and thus not classed as human. The energy levels from these proposed coherent signals from and to antennas positioned within the body and brain will increase the cellular damage from the impacts of radiation coming from outside of the body, which have already been shown to be genotoxic. V.6

The modulating levels from low power mobile communication devices operating in the non-ionizing energy spectrum were shown to cause reactive oxygen species (ROS) and to be genotoxic to animals in the largest independent study conducted, the National Toxicology Program (NTP) study, the results of which are supported by the larger body of independent published science. These studies confirm the genotoxic effect on animals from sub chronic ICNIRP guideline-level exposures. 5G urban emissions are designed to deliver chronic radiation exposure that will undoubtedly increase the genotoxic effects on all the biological life that the radiation comes into contact with. These radiation emissions are well over the 6-minute contamination-level guideline recommended across certain spectrums by ICNIRP. Evidence from areas blanketed by the less powerful and less densified radiation emissions of 4G networks have already shown significant detrimental effects on wildlife. V.7.

Smaller biological organisms that make up the whole ecosystem have less protection from man-made radiation emissions and can therefore show effects in a more visible, incontrovertible way. The acute lack of small insects has been shown to be caused primarily by new experimental man-made radiation emissions, including light emitting diodes (LED) which have been little studied for their detrimental effects on the environment. V.8

The addition of nano metamaterials through implant, injection, and environmental contamination will create a cytotoxic environment detrimental to all biological life. Localized reflection from the metamaterial antennas or the nanometal-contaminated vaccinated entities will add to a substantial increase in radiation exposures, especially across cities. 5G backhaul technology can now capture and interrogate multiple data points, conversations, as well as bodily biometrics and movements 24 hours per day, every day, to the detriment of the Covid-19-vaccinated for the rest of what is likely to be a limited life expectancy, as well as of those unable to remove themselves from these 5G radiation networks and nanoparticle-polluted environments.

Man-made magnetic fields accompany the digitized (QAM) beam wave, which increases emissions and creates an energy vibration disturbance of the nano metamaterial particulates in the contaminated vaccinated body; this will significantly increase the cytotoxicity of the technologies on an unsuspecting mass population of vaccinated persons.

The mandating of this technological experiment in the form of a vaccine that increases sterility and causes untimely death is a criminal enterprise by organizations and individuals who have failed to recognize the compartmentalized development of weapon systems required for the control and planned depopulation agenda. The mass depopulation intelligence was confirmed in defence circles as early as 2017 by the Deagel weapons hardware intelligence group, which predicted many millions of casualties occurring in countries across the West by 2025.

Ignorance should serve as no defence for these criminals, who are party to waging asymmetrical war against an ignorant and terrorized populace.

The criminals may be identified by their total disregard of obligatory environmental risk assessments and safety standard norms in regard to experimental technologies and the precautionary principles that should be applied to them.

UK government data show clearly that the experimental vaccines do not work as a vaccine and are posing a significant risk to the population through serious adverse reactions in the millions, including death. Despite there being no benefit to children in the injection of this poison into them, the actors behind this planned murderous event ignore the science and the irrefutable data as they press on with their covert warfare agenda against the most vulnerable in our societies. V.9

The CDC admit to the current life-threatening dangers posed to the young from this experimental technology, with no long-term data on the dangers posed by this biochemical weapons deployment. At the root of the flagrant disregard of all ethical and legal obligations is the overarching military battlefield agenda, which dictates that war should now be waged against civilian populations.

Conclusion

To quote Martin L Pall, PhD, Emeritus Professor of Biochemistry and Medical Sciences at Washington State University, **“Putting tens of millions of 5G antennas, without a single biological test of safety, has to be about the stupidest idea anyone has had in the history of the world”.** Professor Pall is wrong, however: it is not a stupid idea but a heinous crime if one understands the motive behind this deployment. 5G is a compartmentalized weapons deployment masquerading as a benign technological advance for enhanced communications and faster downloads. The globalist false propaganda falls away with one simple undisputed fact: their PCR test patent for Covid-19, which was filed in 2015, was never able to identify a live virus, so that it could be utilized to terrorize ignorant and unsuspecting populations across the world into taking a Covid-19 vaccine polluted with a nano antenna technology to hook victims up to the 5G network.

Emerging 5G, autonomous, augmented reality technologies, often referred to by the manufactures as “killer tech”, will prove to be exactly that. The laissez-faire approach adopted by regulatory bodies and the telecoms industry encouraged the total disregard of the known biological harm from increasing levels of ionizing and non-ionizing radiation arising from the mass deployment of these technologies, which were developed for battlefield use. Non-governmental organizations, individuals and groups have had to take court action against government safety regulatory organizations as they have ignored the precautionary principle and disregarded the requirement for standards which are indispensable in law for new and experimental product developments.

The whole basis for the existence of regulatory bodies has been corrupted by criminals within these organizations who have destroyed the confidence of the educated public in them.

\Basic safety requirements have been wilfully ignored by the telecoms industry and the ICNIRP guidelines have been deliberately designed to confuse those who lack technical knowledge.

The Covid-19 vaccine adverse reactions data read like the destruction of mankind as millions of North American citizens die and are injured in this medical experiment that is in breach of the Nuremberg Code and the Rome Statute of the International Criminal Court.

Levels of radiation emissions from the 5G network empirically exceed the COE 1815 Resolution and confirm the assault, causing actual bodily harm to populations across the world. The fact that the Covid-19 vaccines vector data were developed in biological chemical weapons laboratories proves that they are only masquerading as vaccines, with the emerging data of sterilization, ill health and death across the West revealing their true purpose. The depopulation of those with no knowledge of the murderous agenda will continue until the criminals involved in this mass murder are brought to justice. The 5G network has the capability to target acquire and attack the vaccinated due to their nano metamaterial antenna Covid-19 vaccine.

Lethal Autonomous Weapons Systems (LAWS) require the 5G networks to maintain their geoposition and navigate their environment to the target; these weapons cannot rely on satellite communications due to the potential for inclement weather events and signal latency to disrupt their signals so they must have localized 5G networks for the upcoming cityscape battlefield environment, for assassination capability and for battlefield domination in planned future wars. Rogue actors are implementing the Final Solution, a Third Reich concept now actualized by the WEF Build Back Better, Fourth Industrial Revolution against civilian populations, as proposed by the defence industry in breach of the Geneva Conventions, as well as domestic and international laws and treaties.

For the avoidance of doubt, the definition of a weapon is a device, tool, or action that has been fashioned to cause physical or psychological harm in breach of the primary legislation.

The compartmentalization of weapons systems development has played a crucial role in not alerting those within the regulatory authorities and telecommunications industry to the real purpose and intentions of those ultimately driving and funding the deployment of 5G and biological chemical weapons masquerading as Covid-19 vaccines for a planned control and command kill grid.

The world is blindly following the plans of the technocratic elite and the military-industrial-pharma complex to terminate large numbers within populations across the world with no regard to the primary legislation.

God-given rights and laws enshrined for the protection of men and women have been disregarded by these cult-like forces in their depopulation, sterilization and mass murder agenda.

5G is a weapon system, a crime against humanity so monstrous that even an educated person would find it unbelievable on first inspection of the facts.

The prima facie evidence of this globalist depopulation agenda is unequivocal and should be tested in the courts so that the conspirators involved in this murderous plan can be brought to justice. This is the greatest crime ever to be perpetrated on mankind and all of God's creation.

Statement of Truth

I believe that the facts stated in this witness statement are true. I understand that proceedings for contempt of court may be brought against anyone who makes, or causes to be made, a false statement in a document verified by a statement of truth without an honest belief in its truth.
